

EXPERIMENT-8

Multi-Armed Bandit Exploration-Exploitation Algorithms

Name: L. Sanjay Kumar

Reg no: 192425226

Course code: MLA0305

Course Name: REINFORCEMENT LEARNING

Aim

To evaluate ϵ -greedy, UCB1, Softmax, and Thompson Sampling algorithms on a 10-armed Gaussian bandit problem.

Procedure

1. Generate 10-armed Gaussian bandit with true values $\mu_a \sim \mathcal{N}(0, 1)$ and stochastic rewards $R_a \sim \mathcal{N}(\mu_a, 1)$.
2. Implement sample-average action value estimation $Q_t(a)$.
3. Implement fixed ϵ -greedy exploration ($\epsilon=0.01$ and $\epsilon=0.10$).
4. Implement Upper Confidence Bound UCB1 selection $A_t = \operatorname{argmax} [Q_t(a) + c \sqrt{(\ln t / N_t(a))}]$.
5. Implement Thompson Sampling with Bayesian posterior updates.
6. Record average reward and % optimal action selection over 1,000 steps across 200 independent runs.
7. Plot average reward curves, optimal action %, cumulative regret growth, and arm selection donut charts.
8. Perform one-way ANOVA statistical significance testing across algorithms.

Result

Multi-armed bandit exploration strategies were successfully benchmarked. Thompson Sampling and UCB1 achieved logarithmic cumulative regret growth and superior optimal arm identification.
